THE TOWN OF FALLSBURG
RESIDENTIAL DECK
BUILDING GUIDELINES

AS COMPLIED FROM THE

2010 NYS UNIFORM BUILDING CODES

2013 AMERICAN WOOD COUNCIL

2009 INTERNATIONAL RESIDENTIAL CODE

NOTE:

WHERE CODES HAVE BEEN FOUND TO CONFLICT, THE MORE STRINGENT SHALL APPLY
Joist Sizing

The span for a joist is measured from the centerline of the bearing at one end of the joist to the centerline at the other and does not include overhangs. Maximum joist span lengths are noted in the table below. R502.3.1 (2)

<table>
<thead>
<tr>
<th>Residential Joist Spacing</th>
<th>ASSUME: 40 psf live load using pressure treated lumber / 5 psf dead load</th>
</tr>
</thead>
<tbody>
<tr>
<td>JOIST SPACING</td>
<td>MAX. CLEAR SPAN</td>
</tr>
<tr>
<td>2 x 6 @ 16&quot; OC</td>
<td>9'-9&quot;</td>
</tr>

</tr>
</tbody>
</table>

Girder Sizing

Girder sizing is based on one floor only. Girder sizing determines the maximum space measured at the centers of each support post supporting the girders. Assuming 20’ width deck & # 2 Pressure Treated Southern Pine. R502.5(2)

<table>
<thead>
<tr>
<th>Girder Size</th>
<th>Maximum Span</th>

</tbody>
</table>

Cantilever: Only up to 2 feet cantilever allowed. All cantilevers are subject to uplift protection by use of hurricane ties at floor joist to girder connection. All manufacturers provided fastener holes shall be filled with minimum 1.5” galvanized fasteners.

Footer: All pre-cast footer pads or concrete forms shall set upon virgin ground or a compacted stone bed of at least 8” with the bottom of either at a minimum 48” depth. When a solid ledge is verified by Code Enforcement the use of drilling and pinning with a minimum of (2) #4 rebars per footing may be utilized. Minimum depth of drilling & pinning shall be 4” into ledge. An inspection of the drilling & pinning must be performed by Code Enforcement after rebar is installed into ledge prior to backfilling.
PROHIBITED LEDGER ATTACHMENTS

Attachments to the ends of pre-manufactured open web joists, to brick veneers, and to house overhangs/bay windows are strictly prohibited; see Figure 1 through Figure 3. In such case the deck shall be free-standing.

Figure 1: NO ATTACHMENT TO OPEN WEB TRUSSES
Figure 2: NO ATTACHMENT TO BRICK VENEER
Figure 3: NO ATTACHMENT TO HOUSE OVERHANG

LEDGER BOARD FASTENERS

All fastener types shall be spaced per TABLE 4 and installed per Figure 4. All fasteners shall be installed with washers and must be thoroughly tightened. Adequacy of connections will be verified by inspectors. If a ladder is required to access the ledger board, one must be provided by the property owner, permit holder, or their representative.

LEDGER ATTACHMENT REQUIREMENTS
As shown in Figure 8, guard posts may be attached to the outside face of the rim joist. However, in this condition, the rim joist must be fastened to the next adjacent joists with 20 gage. *stud tie plates* attached per the manufacturer's instructions-with hot-dipped galvanized or stainless steel fasteners. Stud tie plates must be galvanized with 1.85 oz/sf of zinc (G-185 coating) or shall be stainless steel. Look for model number SP1 in a Zmax coating from Simpson Strong-Tie or model number SPT22 in a Triple Zinc coating from USP. If you are unable to use *stud tie plates* in this condition, you must follow the requirements of Figure 8:

Figure 9: GUARD POST TO RIM JOIST DETAIL, OPTION 2
GUARD REQUIREMENTS

Decks less than 30" above grade are not required to have a guard; however, if one is installed, it must meet these requirements. All guards shall be constructed in strict conformance with figures herein; any deviations require a plan submission.

Figure 10: GUARD POST ATTACHMENT DETAIL

Figure 11: GUARD POST TO OUTSIDE JOIST DETAIL

Figure 12: GUARD REQUIREMENTS
RIM JOIST REQUIREMENTS

Attach a continuous rim joist to the ends of joists as shown in Figure 13. Please note: rim joists are required at both ends of joists associated with free-standing decks. Minimum rim joist dimensions shall be equal to the dimensions of the joist.

Figure 13: RIM JOIST CONNECTION DETAILS

BUILT-UP BEAM REQUIREMENTS

Built-up beams shall be assembled in accordance with Figure 14. The nailing pattern shall be staggered as shown.

Figure 14: BUILT-UP BEAM DETAIL

Figure 15: Post-to-Beam Attachment Requirements

Figure 16: Prohibited Post-to-Beam Attachment Condition
JOIST HANGERS

Joist hangers, as shown in FIGURE 16, shall have a Minimum capacity of 1000 lbs. Joist hangers used Shall be manufactured for their intended lumber size. Joist hangers shall be galvanized with 1.85 oz/sf of Zinc (G-185 coating) or shall be stainless steel.

JOIST-TO-BEAM CONNECTION

Each joist shall be attached to the beam as shown in Figure 18. Mechanical fasteners shall be galvanized with 1.85 oz/sf of zinc (G-185 coating) or shall be stainless steel.

Figure 17: TYPICAL JOIST HANGERS

Figure 18: JOIST-TO-BEAM DETAIL

Lag Screws

Lag screws shall have a minimum diameter of $\frac{3}{4}$" and shall be hot-dipped galvanized or stainless steel. Lag screws may be used only when the field conditions match those shown in FIGURE 5. You must verify the existing conditions in the field prior to applying for a building permit and installing lag screws. Compliance with all the requirements herein is critical to ensure the structural stability of your deck. See Figure 19 for lag screw length and shank requirements. All lag screws shall be installed with washers.

Figure 19: LAG SCREW REQUIREMENTS

Lag screw installation requirements: each lag screw shall have lead (pilot) holes drilled as follows: 1) drill a $\frac{3}{4}$" diameter hole in the ledger board, 2) drill a $\frac{3}{16}$" diameter hole into the solid connection material of the existing house. DO NOT DRILL A $\frac{3}{4}$" DIAMETER HOLE INTO THE SOLID CONNECTION MATERIAL.
Stairs, stair stringers, and stair guard shall meet the requirements shown in FIGURE 27 through FIGURE 33. All stringers shall be 2x12.

Incidental Requirements.

Setbacks:
Unless more stringent local zoning codes apply, all open decks and parts thereof shall be maintained a minimum of 3 feet from property lines and a minimum of 6 feet from another deck or structure whether on the same lot or an adjoining property. Decks with roofs must comply with local zoning setbacks and lot coverage restrictions.

R303.6 Stair Lighting Requirements:
Stairways shall have a light source located at the top landing such that all stairs and landings are illuminated. The light switch shall be operated from inside the house. However, motion detected or timed switches are acceptable.

E3801.7 Outdoor Outlets:
At least one Balconies, decks and porches that are accessible from inside of the dwelling unit and have a usable area of 20 sq. ft. of floor area or greater shall have at least one receptacle outlet installed within the perimeter of the balcony, deck or porch. The receptacle shall be located not more than 6 feet, 6 inches above the balcony, deck or porch surface.
STAIR HANDRAIL REQUIREMENTS

All stairs with 2 or more risers shall have a handrail on one side. Handrails shall be grasable and shall be composed of decay-resistant and/or corrosion resistant material. The hand grip portion, if circular, shall be between 1-1/4" and 2-1/4" in cross section. Shapes other than circular shall have a perimeter dimension between 4" and 6-1/4" with a maximum cross sectional dimension of 2-1/4". All shapes shall have a smooth surface with no sharp corners. Handrails shall run continuously from a point directly over the lowest riser to a point directly over the highest riser and shall return to the guard at each end; see Figure 27. Handrails may be interrupted at guards posts only at a turn in the stair.

Figure 25: Handrail Mounting Examples

Fasten handrails per manufacturer recommendations.

Figure 26: Handrail Grip Size

NONCIRCULAR
(R311.7.7.3 Type I)
Perimeter: 4" - 6 3/4"  

CIRCULAR
(R311.7.7.3 Type II)
Perimeter: > 6 3/4"
FREE-STANDING DECKS

Decks which are free-standing do not utilize the exterior wall of the existing house to support vertical loads (see Figure 30); instead, an additional beam with posts is provided with a maximum 24" cantilever.

DECK STABILITY

Decks greater than 2 feet above grade shall be provided with diagonal bracing.
